

VACUUM-SINK

One of the most sustainable mobile hygienic systems on the market today, this eight-person sink module comes equipped with water saving taps and a sewage connection that relies on a proven vacuum flush design powered by Jets™ technology. Washing your hands at a festival or event will never be the same again!

The sink module is equipped with eight individual, stylishly designed sinks, eight water saving taps, four soap dispensers, two integrated paper towel dispensers or hand dryers, four integrated paper bins, and two huge full-size stainless steel mirrors. Inside the module there is enough space for extra paper towels and soap — so you don't run out or forget to bring to the event. The sink module is lit with recessed, waterproof LED lights which provide ample lighting as well as a high quality look.

No special tools are required for set up. The small containerized modules make set-up quick and simple with their highly flexible arrangement, regardless of on-site logistics. The galvanized heavy forklift-proof frame and ISO standard corner fittings make the modules very easy and safe to transport and maneuver with a forklift or crane for unloading, placing, leveling, and loading.

The collapsible design provide easy, safe, and economical transport. Every four foot section of truckbed accommodates two modules, thus 16 individual sinks per four feet. This enables a 53' trailer to load 22 modules for a total of 176 sink positions.

This allows event organizers to provide dependable, high-end, high volume sanitation facilities to their visitors, each and every time.
